

Ashish Jha

Ghaziabad, India — +91-7011568986 — ashisheduims@gmail.com — github.com/Ashish5689 — linkedin.com/in/ashish-jha5689

Professional Summary

Backend-focused Full Stack Engineer with 3.7 years building distributed services, asynchronous event pipelines, and third-party integrations on Node.js and Java Micronaut. Shipped OAuth/JWT + OTP authentication (+20% login success) and a webhook-driven, SQS-backed email ingestion pipeline processing 500–600 emails/day with S3 storage and CloudWatch observability.

Technical Skills

Backend: Node.js, Express.js, Java Micronaut, REST APIs, Microservices, WebSockets, Webhooks

Frontend: React.js, Next.js, JavaScript, TypeScript, HTML, CSS

Cloud & Messaging: AWS S3, ECS, Lambda, SQS, RabbitMQ, CloudWatch

Databases & Cache: MongoDB, PostgreSQL, MySQL, Redis

Auth & Integrations: OAuth, JWT, FusionAuth, Gmail API, Outlook API, Twilio, SendGrid

Tools & Practices: Git, Docker, GitHub Actions, CI/CD, Postman, System Design, Idempotency & Retry Patterns

Work Experience

Atomise India

Aug 2025 - Present

Software Engineer — Gurugram, India

- Architected backend services in a Java Micronaut + Node.js monorepo powering authentication, webhook-driven email ingestion, and cloud-backed application workflows.
- Built OAuth/JWT authentication with Twilio OTP and SendGrid magic links, raising login success rate by 20%.
- Designed a webhook + SQS email pipeline over the Gmail and Outlook APIs with idempotent processing and retry handling, ingesting 500–600 emails/day and persisting attachments to AWS S3.
- Instrumented CloudWatch log analysis and alerting for auth and email workflows, cutting backend issue-investigation time by ~40%.

Optimiser India Pvt Ltd

Oct 2022 - Aug 2025

Associate Software Engineer — Noida, India

- Built and shipped Node.js microservices and React.js applications serving 10k+ users across customer-facing workflows.
- Optimized high-traffic REST APIs and MongoDB access patterns through indexing and cursor pagination, improving response times and data-access reliability.
- Reduced application load time by ~20% and improved runtime performance by ~30% via frontend bundle optimization and API/query tuning.
- Owned end-to-end delivery of reusable full-stack modules across React, Node.js, and the data layer, shortening turnaround on recurring product requirements.

Projects

Flash-Sale Ticketing System

Node.js, Express, PostgreSQL, Redis, WebSockets, Docker

Backend Project — Link: <https://github.com/Ashish5689/flash-ticketing>

- Built a high-concurrency ticketing backend that reserves seats under heavy contention without overselling, backed by PostgreSQL as the source of truth.
- Implemented atomic seat reservation in Redis (SET NX / Lua scripts) with time-boxed holds and idempotent payment confirmation to guarantee exactly-once booking.
- Added a Redis-backed virtual waiting-room queue that admits users in controlled batches, streaming live queue position and booking confirmation over WebSockets.

Multi-Channel Notification Platform

Java Micronaut, PostgreSQL, Redis, RabbitMQ, Docker

Backend Project — Link: <https://github.com/Ashish5689/notification-platform>

- Designed a distributed notification system with independent Auth, Notification, Email, SMS, and Analytics services communicating asynchronously over RabbitMQ.
- Guaranteed reliable delivery with idempotent workers, exponential-backoff retries, and a dead-letter queue for exhausted messages, plus Redis-backed rate limiting per channel and recipient.
- Scaled channel delivery with dedicated worker processes and Redis caching, and instrumented per-service metrics and structured logging for monitoring.

Education

Master of Computer Applications (MCA), Institute of Management Studies

2020 - 2022

CGPA: 8.8

Bachelor of Computer Applications (BCA), Chaudhary Charan Singh University

2017 - 2020

Percentage: 66%
